

## PRESTATIEVERKLARING

### DoP 0208

voor fischer Zykon- Anchor FZA, FZA-D, FZA-I, FZA ST (mechanisch anker voor gebruik in beton)

NL

1. Unieke identificatiecode van het producttype: DoP 0208
2. Beoogd(e) gebruik(en): Bevestigingen in gescheurd of ongescheurd beton, zie bijlage, met name de bijlagen B1- B7.
3. Fabrikant: fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Duitsland
4. Gemachtigde: -
5. Het systeem of de systemen voor de beoordeling en verificatie van de prestatiebestendigheid: 1
6. Europees beoordelingsdocument: EAD 330232-01-0601, (Edition 05/2021)  
Europese technische beoordeling: ETA-98/0004; 2021-06-16  
Technische beoordelingsinstantie: DIBt- Deutsches Institut für Bautechnik  
Aangemelde instantie(s): 2873 TU Darmstadt

7. Aangegeven prestatie(s):

**Mechanische weerstand en stabiliteit (BWR 1)**

**Kenmerkende weerstand tegen spanningsbelasting (statische en quasi-statische belasting), methode A:**

Weerstand tegen staalbreuk: Bijlagen C1-C3  
Weerstand tegen uittrekken: Bijlagen C1-C3  
Weerstand tegen betonnen kegelbreuk: Bijlagen C1-C3  
Robuustheid Bijlagen C1-C6  
Minimale rand- en hartafstand: Bijlage C7  
Randafstand om spleetbreuk onder belasting te voorkomen: Bijlagen C1- C3

**Kenmerkende weerstand tegen schuifbelasting (statische en quasi-statische belasting), methode A:**

Weerstand tegen staalbreuk (afschuifbelasting): Bijlagen C4- C6  
Weerstand tegen uitbreken (pryout): Bijlagen C4- C6

**Kenmerkende weerstand voor een vereenvoudigd ontwerp:**

Methode B: NPD  
Methode C: NPD

**Verplaatsingen:**

Verplaatsingen onder statische en quasi-statische belasting: Bijlagen C14, C15

**Kenmerkende weerstand en verplaatsingen voor de seismische prestatiecategorieën C1 en C2:**

Trekkrachtweerstand, verplaatsingen categorie C1: Bijlagen C8, C9  
Trekkrachtweerstand, verplaatsingen categorie C2: Bijlagen C10, C11, C15  
Weerstand afschuifbelasting, verplaatsingen categorie C1: Bijlagen C8, C9  
Weerstand afschuifbelasting, verplaatsingen categorie C2: Bijlagen C10, C11, C15  
Factor ringvormige opening: Bijlagen C8- C11

**Veiligheid in geval van brand (BWR 2)**

Reactie op brand: Klasse (A1)

**Weerstand tegen vuur:**

Weerstand bij brand, staalbreuk (trekbelasting): Bijlagen C12, C13  
Weerstand bij brand, uittrekken, (trekbelasting): Bijlagen C12, C13  
Weerstand bij brand, staalbreuk (afschuifbelasting): Bijlagen C12, C13

**Duurzaamheid:**

Duurzaamheid: Bijlagen A7, B1

8. Geëigende technische documentatie en/of specifieke technische documentatie: -

De prestaties van het hierboven omschreven product zijn conform de aangegeven prestaties. Deze prestatieverklaring wordt in overeenstemming met Verordening (EU) nr. 305/2011 onder de exclusieve verantwoordelijkheid van de hierboven vermelde fabrikant verstrekt.

Ondertekend voor en namens de fabrikant door:

Dr.-Ing. Oliver Geibig, Directeur Business Units & Engineering  
Tumlingen, 2021-06-30

Jürgen Grün, Directeur Chemie & Kwaliteit

Deze DoP is opgesteld in meerdere talen. In het geval van geschillen over de interpretatie zal de Engelse tekst altijd prevaleren.

Het aanhangsel bevat vrijwillige en aanvullende informatie in het Engels die de (taal-neutraal gespecificeerde) wettelijke vereisten overschrijdt.

## Specific Part

### 1 Technical description of the product

The fischer-Zykon-Anchor FZA, FZA-D, FZA-I and FZA ST is an anchor made of galvanised or stainless or high corrosion resistant steel which is placed in an undercut hole and anchored by mechanical interlock with displacement-controlled installation.

The bolt projection anchor FZA and the through bolt anchor FZA-D consists of a conical bolt with external thread, an expansion sleeve and a hexagon nut with washer. The internal threaded anchor FZA-I consists of a conical bolt with internal thread and an expansion sleeve. The bold projecting anchor FZA ST consists of a conical bolt with hexagon projecting end, an expansion sleeve with colour marking, a hexagon nut with washer and a plastic sleeve.

The anchor is anchored by impact acting on the expansion sleeve over the cone bolts in the undercuts of the borehole.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading) Method A	See Annex C1 to C3, Annex C7
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C4 to C6
Displacements	See Annex C14 and C15
Characteristic resistance and displacements for seismic performance category C1 and C2	See Annex C8 to C11

#### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C12 and C13

#### 3.3 Aspects of durability linked with the Basic Works Requirements

Essential characteristic	Performance
Durability	See Annex B1

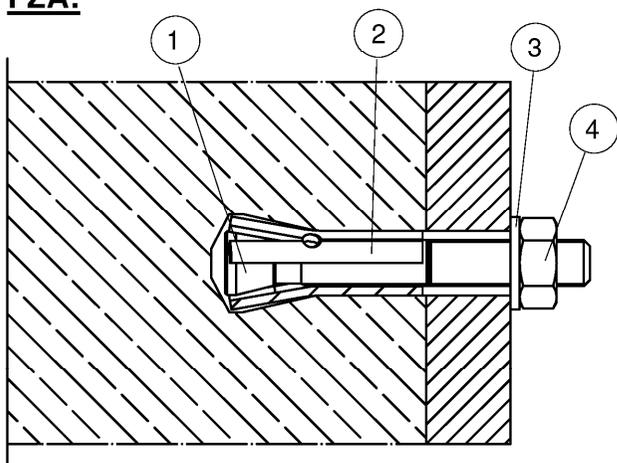

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with the European Assessment Document EAD 330232-01-0601 the applicable European legal act is: [96/582/EC].

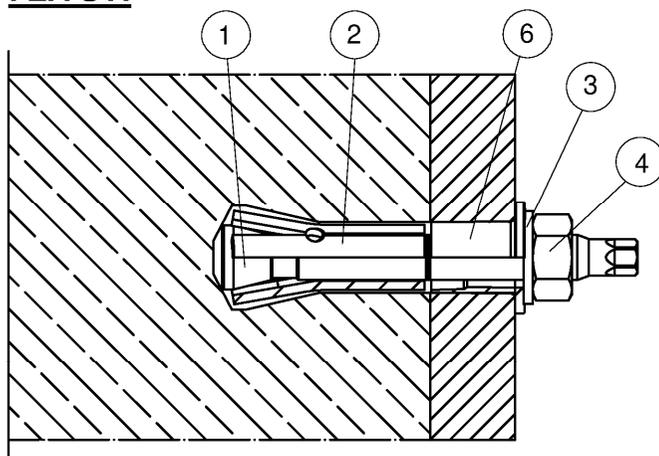

The system to be applied is: 1

Static and quasi-static loads					
Cracked and uncracked concrete	✓		✓		✓
Fire exposure		✓		✓	
Seismic performance category	C1 C2	1)	1)		1)

<sup>1)</sup> No performance assessed

#### Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres (cracked and uncracked) of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

#### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions:

#### FZA, FZA D, FZA HDG, FZA D HDG, FZA I

- For all other conditions according to EN 1993-1-4:2015-10 corresponding to corrosion resistance class:
  - CRC III: **FZA R, FZA D R, FZA I R, FZA ST R**
  - CRC V: **FZA HCR, FZA D HCR, FZA I HCR**

#### Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- For the internally threaded anchors FZA I the characteristic resistances against steel failure for screws or threaded rods must be designed additionally from the construction site. Screw lengths are to be determined by the planning engineer taking into account the thickness of the component to be connected, the thickness of the washers and the required screw-in depth (according to Annex B4) and tolerances
- Design of fastenings according to EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018

## Installation instructions for FZA, FZA D, FZA I, FZA ST

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Use of the anchor only as supplied by the manufacturer without exchanging the components of the anchor
- Checking before placing the anchor to ensure that the strength class of the concrete in which the anchor is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply
- Check of concrete being well compacted, e.g. without significant voids
- Drill hole created perpendicular  $\pm 5^\circ$  to concrete surface, positioning without damaging the reinforcement
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application
- Anchor must be installed to comply with the correct anchorage depth. This is assured when the front face of the sleeve, for the internal thread, is approximately 1mm below the concrete surface or, in the case of the through bolt versions, approximately 1mm below the front surface of fixture. When using the FZA 12x40 ST the knurling on the sleeve is flush or below the concrete surface. For the bolt and through bolt version the anchor is correctly expanded if the colour marking on the thread of the tapered bolt is visible.

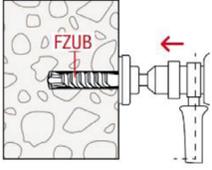

fischer-ZYKON-Anchor FZA, FZA D, FZA I, FZA ST

**Intended Use**  
Installation instructions

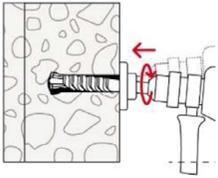

**Annex B 5**

Appendix 14 / 31

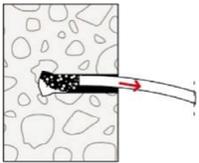

## Pre-positioned installation FZA, FZA I and FZA ST

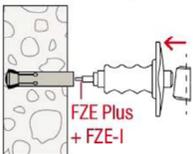

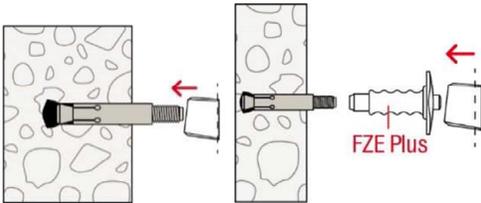

1.: The drill hole must be drilled at right angles ( $\pm 5^\circ$ ) to the surface of the anchor base with a hammer drill using the corresponding ZYKON FZUB drill bit. The required drilling depth is reached when the depth stop of the FZUB is in contact with the concrete.

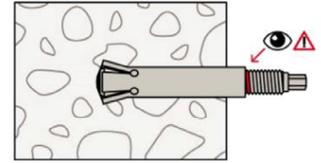

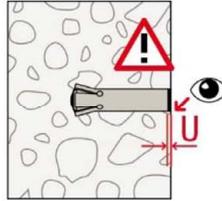

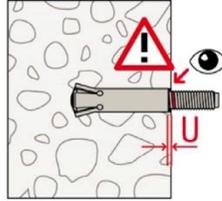

2.: Once the FZUB depth stop meets the concrete, create the drill hole undercut by making circular swiveling movements with the hammer drill while the hammer mechanism is engaged. Press the hammer drill firmly against the anchor base: 1 - 2 swiveling movements are sufficient for  $\varnothing 14$  mm, with 3 - 5 movements for  $\varnothing 18$  mm and  $\varnothing 22$  mm.

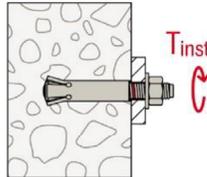

3.: Clean drill hole.

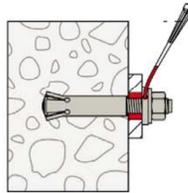

4.: Insert the anchor into the drill hole and then drive the expansion sleeve in with hammer-set device FZE Plus, using a manual hammer.

5.: The anchor is correctly expanded if the colour marking on the thread of the tapered bolt is visible or the gap  $u$  between conical bolt with internal thread and expansion sleeve (FZA I) is fulfilled. When using the FZA 12x40 ST the knurling on the sleeve is flush or below the concrete surface.

6.: Mount installation object (e.g. anchor plate), washer and nut, screw (for FZA I) or threaded rod with washer and nut (for FZA I) and apply installation torque with torque spanner.

**Optional:** The gap between bolt and fixture may be filled with mortar (compressive strength  $\geq 50$  N/mm<sup>2</sup> e.g. FIS SB) after step 6 (for eliminating the annular gap). The filling disc is additional to the standard washer. The thickness of the filling disc must be considered for definition of  $t_{fix}$ . Countersunk of the filling disc in direction to the anchor plate.

**Annex B 6**

Appendix 15 / 31

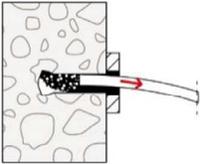

## Push-through installation FZA D

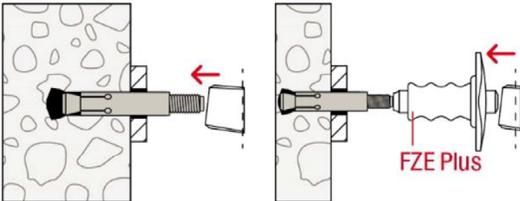

1.: Create a drill hole through the installation object perpendicular to the surface of the anchor base with a hammer drill, using the corresponding Zykon universal drill bit FZUB. The required drill depth is reached once the FZUB depth stop meets the fixture.

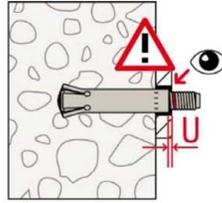

2.: Once the FZUB depth stop meets the fixture, create the drill hole undercut by making circular swiveling movements with the hammer drill while the hammer mechanism is engaged. Press the hammer drill firmly against the anchor base: 1 - 2 swiveling movements are sufficient for  $\varnothing$  14 mm, with 3 - 5 movements for  $\varnothing$  18 mm and  $\varnothing$  22 mm.

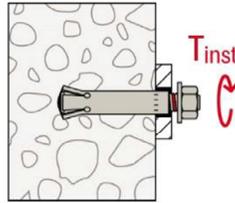

3.: Clean drill hole.

4.: Insert the anchor into the drill hole through the installation object (e.g. anchor plate) and then drive the expansion sleeve in with hammer-set device FZE Plus, using a manual hammer.

5.: The anchor is correctly expanded if the colour marking on the thread of the tapered bolt is visible.

6.: Mount installation object (e.g. anchor plate), washer and nut and apply installation torque with torque spanner.
